

# Discussion 8: Recursion II

## Mystery Blocks

What do each of the blocks below do?

1. \_\_\_\_\_
2. \_\_\_\_\_
3. \_\_\_\_\_

## More Practice

(a) Write a block that reports the index of the first occurrence of a letter in a word. You may assume the letter appears at least once.

position of letter **u** in word **public funds**

2

```
position of letter (letter) in word (word):  
if _____ :  
  report _____  
else:  
  report _____
```

(b) Write a block that counts the instances of an item in a list

count **wow** in list **wow neat wow cool**

2

```
count (item) in (lst):
```

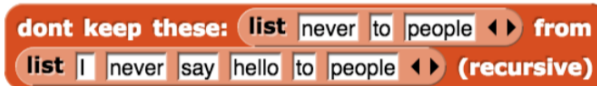

(c) Write a block that finds the max item in a list. You may find the following block useful:

5

maximum item in (lst):

(d) Write a block that removes items in the first list from the second list. You may find the append block, pictured below, useful.

don't keep these (lst1) from (lst2):

## Fibonacci

The Fibonacci sequence is defined as follows: 1, 1, 2, 3, 5, etc., where each number is the sum of the two previous numbers in the sequence.

(a) Fill in the code below to find the nth Fibonacci number:

Fibonacci (n)

```

if _____:
    report _____
if _____:
    report _____
else:
    report _____
    
```

(b) Fill in the recursive tree below representing the call: Fib(4)

(c) What is the runtime of Fibonacci? \_\_\_\_\_
