# **Discussion 8: Recursion II**

## **Mystery Blocks**

What do each of the blocks below do?

```
2.
   +mystery1+ st : +
                                       Reports
                                                               +mystery3+ num + num2 +
                                                                                                     Reports
                                       whether the
   if empty? (Ist)
                                                                                                     num to the
                                                              if \langle num2 \rangle = 0
                                       input list
                                                                                                     power of
    report false
                                       contains a
                                                               report 1
                                                                                                     num2
                                       number
    if is item 1 ▼ of 1st a number ▼ ?
                                                               report num x mystery3 num num2 - 1
     report (true)
     report mystery1 all but first of lst
                                         Reports the
3.
     +mystery2+ word + letter +
                                         number of
                                         times the
     if \left( \text{length of word} \right) = 0
                                         input letter
     report 0
                                         appears in
                                         the input
     if letter = letter 1 of word
                                         word
      report 1 + mystery2 all but first letter of word letter
       report 0 + mystery2 all but first letter of word letter
```

#### **More Practice**

a. Write a block that reports the index of the first occurrence of a letter in a word. You may assume the letter appears at least once in the word.

```
position of S in oski 2
```

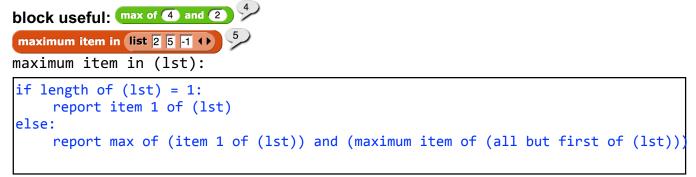

```
position of (letter) in (word):
    if (letter) = letter 1 of (word)
        report 1
else
    report 1 + position of (letter) in (all but first of (word))
```

b. Write a block that counts the instances of an item in a list.

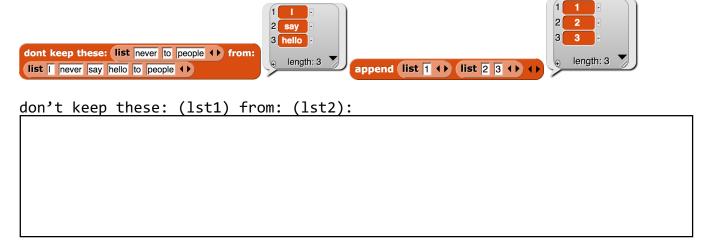

```
count wow in (list cool wow rad wow +)
count (item) in (lst):

if empty? (lst):
    report 0
else:
    report 1 + count (item) in (all but first of (lst))
```

c. Write a block that finds the maximum item in a list of numbers. You may find the following

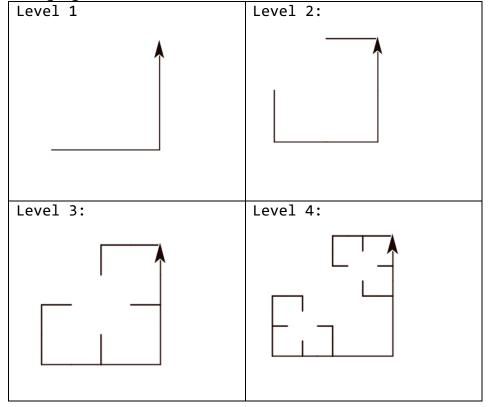

d. Write a book that takes in two lists, and reports a version of the second list without any of the items in the first list. You may find the append block, shown below, useful.

#### **Fractal**

Write out the code to create the following fractal. The sprite starts in the bottom left corner,

facing right.

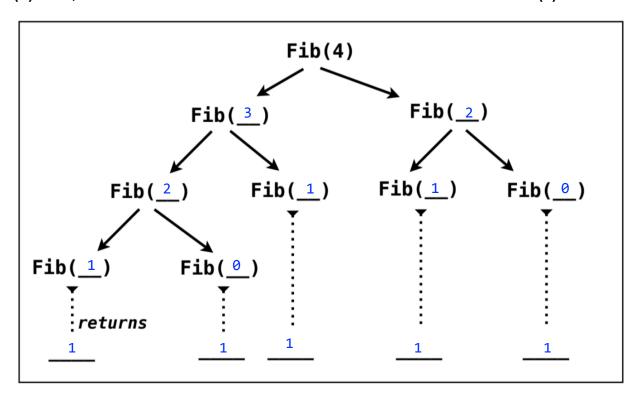

### **Fibonacci**

The Fibonacci sequence is defined as follows: 1, 1, 2, 3, 5, etc., where each number is the sum of the two previous numbers in the sequence.

(a) Fill in the code below to find the nth Fibonacci number:

```
Fibonacci(n)
if n < 1
    report 1
else
    report Fibonacci(n - 1) + Fibonacci(n - 2)</pre>
```

(b) Now, fill out the tree below to visualize the execution of Fibonacci(4)

(c) What is the runtime of Fibonacci? Exponential
